Premium Quartz Flooring for Arc'teryx

PMP Surfacing were appointed to install a specialist internal quartz carpet for a new retail space for premium Canadian outdoor clothing brand Arc'teryx.

Renowned for its high-performance outdoor equipment and clothing, the company have led innovations in climbing, skiing and alpine technologies.

The project involved the use of Vuba Resin products, specifically selected by the retailer to achieve the desired interior aesthetic.

Interior fit-out specialist Esprit UK Limited was appointed as the main contractor for this high-end retail project and worked in tandem alongside PMP Surfacing to deliver a unique and modern shopping experience.

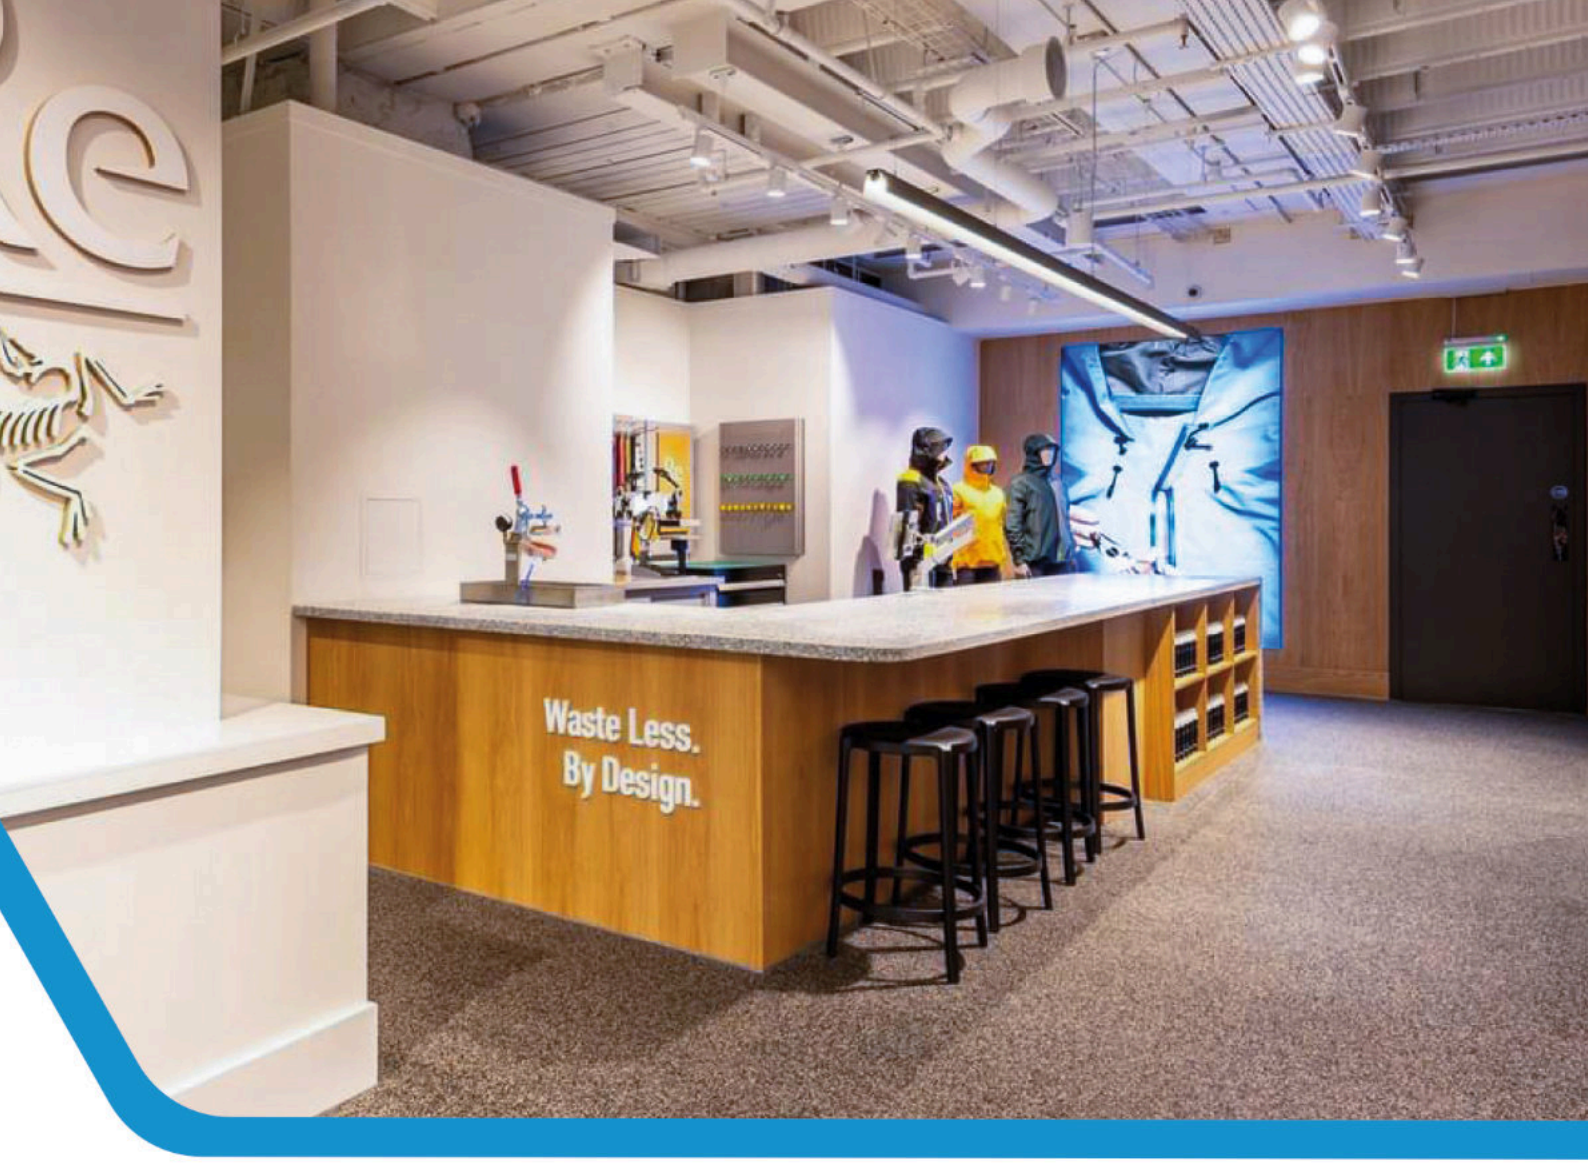

Precision Resin-Bound Flooring

PMP Surfacing installed the internal resin-bound surface during an intense six-day period on-site. The schedule of works, planned by the lead contractor, required careful coordination to ensure other contractors could progress without hindering the precise installation of the flooring.

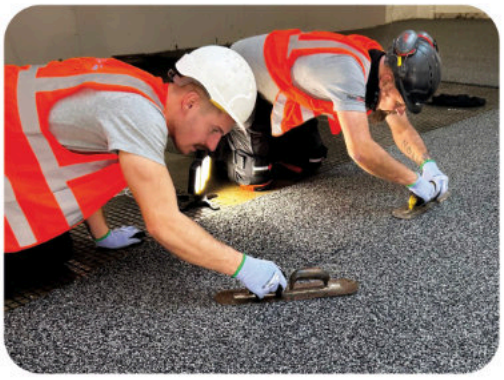

- **Highly Decorative**
- **Range of Colours Available**
- **Can be Easily Cleaned and Maintained**

Specifications

580m² of internal Resin-Bound Stone Surface

The installation was conducted using a carefully designed three-stage process:

1 - Liquid Damp Proof Membrane

A Hydraguard liquid DPM system was applied to the new concrete screed to prevent moisture release and provide a waterproof layer before installing the internal quartz carpet.

2 - Resin Floor

An Internal stone carpet was installed using a batched, on-site mixing process. It was hand-trowelled under specialist lighting to ensure a smooth and even finish.

3 - Pore Filler

A highly viscous, UV-resistant pore filler was applied over the cured resin surface, sealing the pores to create a hard, elastic, stain-resistant and fully watertight finish.
