Park Gate Scheme

Working closely with Casey Construction and Salford City Council, PMP Surfacing transformed the Swinton Greenway trail at Salford in Manchester.

The project was part of Salford City Council's mission to improve cycling and walking routes throughout the area. The idea of a more accessible cycling route was recommended by the Mayor of Greater Manchester Andy Burnham and Flexipave was seen as the perfect solution.

A major factor in the council's choice of Flexipave Surfacing was the environmentally friendly aspect of the product. The Swinton Greenway connects neighbourhoods in Swinton and Monton and is one of the largest porous walkways in the UK. The route has been significantly upgraded to make it more attractive, safer and accessible for all cyclists, commuters dog walkers and wheelchair users.

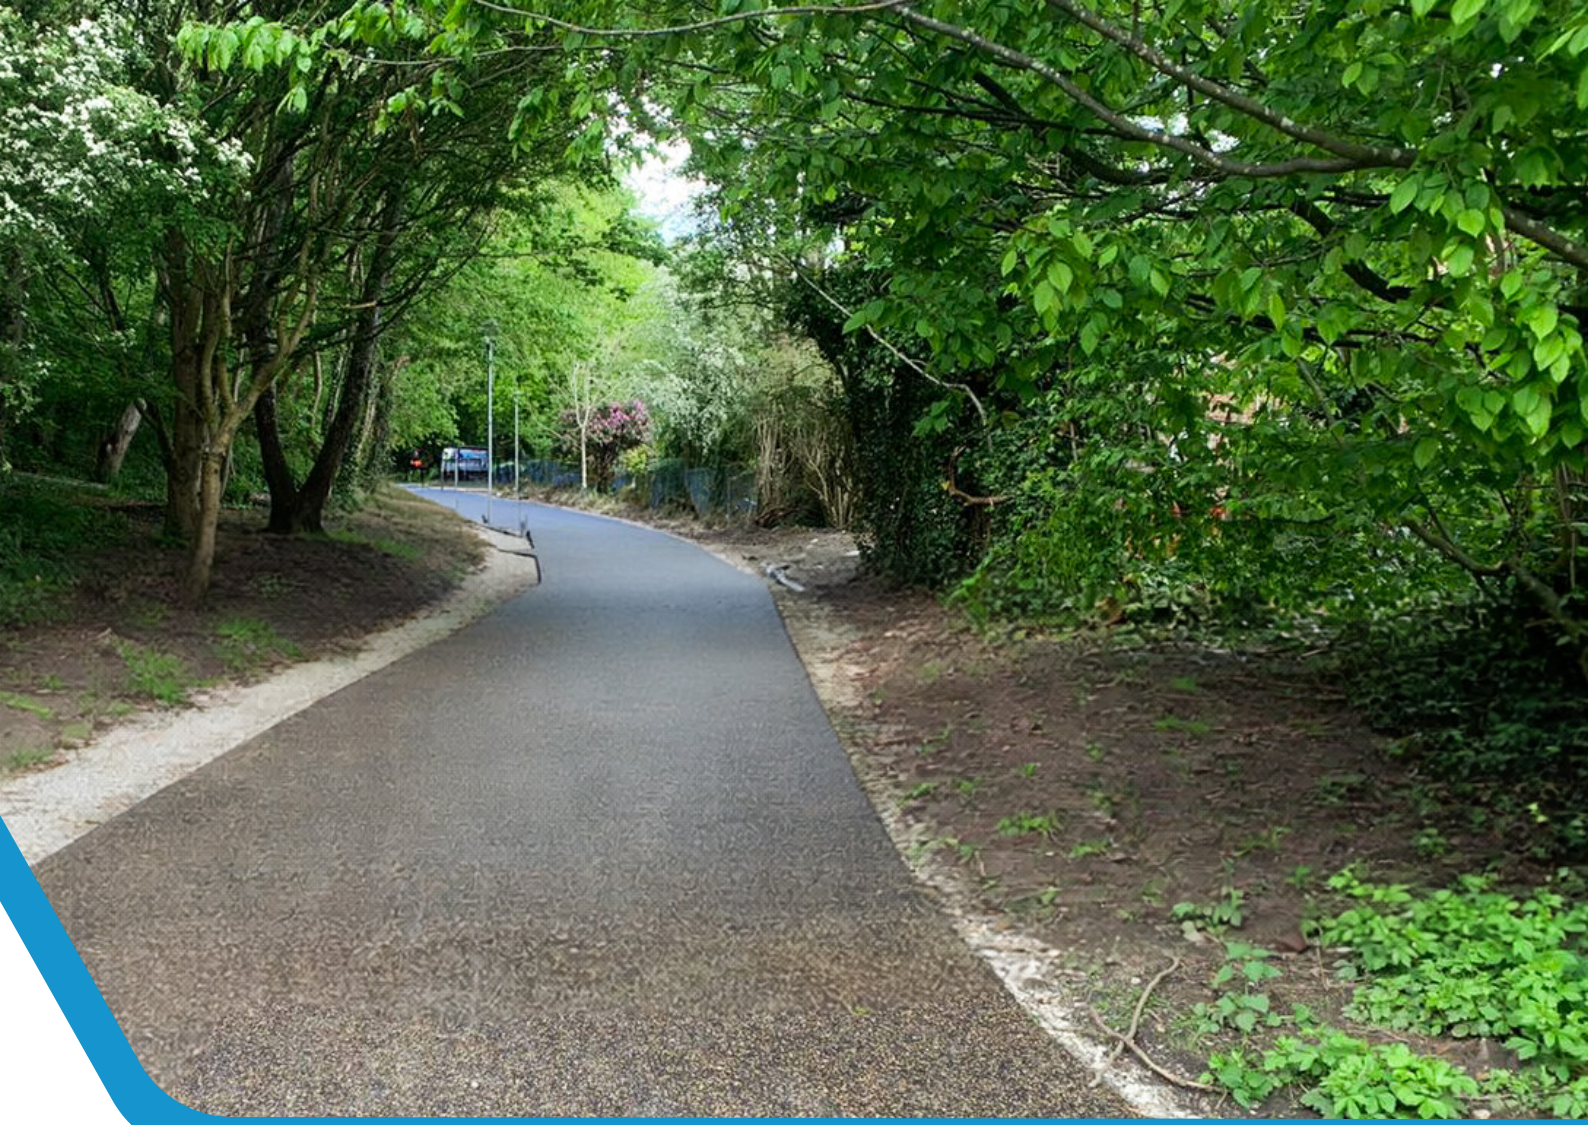

Durable Greenway Surfacing

PMP Surfacing installed 17,447mm² of Flexipave at Swinton Greenway, Salford, creating a durable, accessible pathway network for pedestrians, cyclists and equestrian users. The large-scale installation transformed the existing route into a sustainable, year-round surface using recycled tyre rubber and natural stone aggregate.

Its fully porous construction allows rainwater to drain naturally, while the flexible composition accommodates minor ground movement, helping prevent cracking. The low-maintenance slip-resistant finish provides a long-lasting solution for high-use public infrastructure.

Key Project Benefits

Fully Porous - Allows rainwater to drain naturally.

Flexible Surface - Accommodates minor ground movement, helping to minimise cracking.

Slip Resistant - Delivers excellent grip in wet and dry conditions for improved user safety.

Low Maintenance - Requires minimal upkeep, reducing long-term maintenance costs.

Seamless Finish - Creates a smooth, joint-free surface that enhances comfort and accessibility.

Long Service Life - Engineered to withstand high levels of public use while maintaining performance.

Testimonial

"Swinton Greenway is a superb scheme that will enable more people to leave the car at home and choose to travel on foot or by bike. Using this new route to replace an existing vehicle journey with an active one will help people build activity back into their days, improving both physical and mental health in the process, as well as reducing congestion and even saving people money."

Dame Sarah Storey MBE - Active Travel Commissioner
