Linking Footpath at Matlock, Hurst Farm

Hurst Farm in Matlock is a large 1950s-built social housing estate of over 700 homes that has recently undergone regeneration. The lack of a defined pathway led to worn ground conditions and potential safety concerns for residents and visitors. Working in collaboration with, Ulyett Landscapes, PMP Surfacing installed 889m² of Flexipave to create a fully accessible linking pathway connecting key areas across the estate. This new route improves safety, durability and usability and includes integrated access steps that respond naturally to the landscape.

Positioned within a densely planted area of mature trees and established shrubbery, a "no-dig" installation protected all the root systems. Flexipave provides a stable, permeable and visually sympathetic surface, preventing cracking and long-term wear.

Accessible, Tree Friendly Pathways

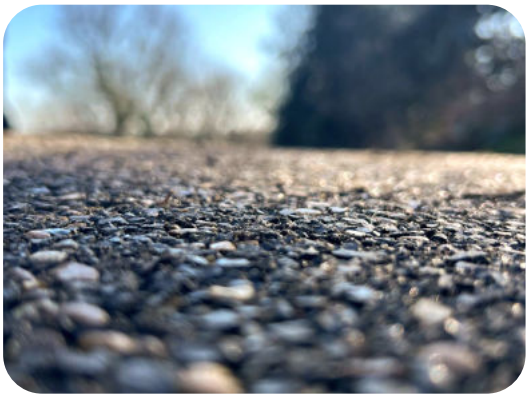

Flexipave offers an ideal solution for creating pathways that are stable, permeable, and visually sympathetic to their surroundings. Its "no-dig" installation preserves existing tree roots and plant life, preventing soil compaction and minimising disruption to the landscape.

The permeable surface supports SuDS compliance by allowing water to drain naturally, reducing puddling and waterlogging. Its flexible composition helps to absorb movement, resisting cracking and ensuring long-term durability under heavy foot traffic. Flexipave pathways meet modern accessibility standards, providing smooth, safe and inclusive routes for all users, while seamlessly blending functionality with the natural character of the environment.

Durability Accessibility Benefits

Stability and Durability - provides a strong, long-lasting surface that withstands heavy foot traffic without cracking or deforming.

Permeable Surface - allows water to pass through naturally, preventing puddles and reducing soil erosion.

Accessibility Compliance - creates smooth, even pathways suitable for all users, including those with mobility aids.

Landscape Protection - "no-dig" installation preserves tree roots and surrounding vegetation, minimising environmental impact.

Aesthetic Integration - blends seamlessly with natural surroundings, maintaining the visual character and charm of the area.
