The National Library of Wales

The National Library of Wales, in Aberystwyth, is the national legal deposit library of Wales and one of the Welsh Government-sponsored bodies.

It is the largest library in Wales, holding over 6.5 million books and periodicals, as well as the largest collections of archives, portraits, maps and photographic images in the country.

Work to resurface the public access areas around the building using Flexipave began in spring 2021. The entrance footpath was previously a slippery stone surface, which created safety issues for visitors.

Working closely with the client to meet their objectives, we replaced the existing surface stone with 230m² of Flexipave. The recycled rubber used within the material repurposed 615 recycled car tyres, making it an extremely eco-friendly solution.

Sustainable Porous Paving Solutions

PMP Surfacing is a specialist supplier of sustainable porous paving solutions, developed in-house to ensure high performance and environmental responsibility. Our materials differ from traditional hard surfaces and resin-bound systems, offering superior porosity for effective drainage and a reduced flood risk. The flexibility of the material helps to prevent cracking, ensuring long-term durability.

Combining functionality with a clean, seamless finish, our surfacing provides a practical, resilient and eco-friendly solution for a wide range of outdoor environments.

Key Benefits

Highly Porous - allows water and air to flow through the material in high volumes.

Dynamic - the unique polyurethane binder allows the finished surface to gently flex, giving it the ability to adjust to different temperatures and conditions without cracking.

Adaptable - can be installed onto existing hard surfaces but can also be installed onto simple stone sub-bases without the need to lay costly engineered sub-layers.

Sustainable - 615 recycled vehicle tyres were used within this project, contributing to a repurposed build while providing an eco-friendly pathway.
