PMP Surfacing Golf Partnership

About The Scheme - The PMP surfacing Golf Club Partnership is a three-tier scheme designed to help golf clubs upgrade their pathways using the unique Flexipave porous surfacing system. Your staff will be trained to prepare, mix and install Flexipave surfacing. Once fully trained, your team can purchase the raw materials directly from PMP Surfacing as and when required.

The Golf Partnership Scheme

Level One

- Greater flexibility in the quantities of material you wish to install.
- Reduced installation lead times and costs by utilising your own workforce.
- Orders are delivered on pallets and prepared in our warehouse to provide the correct quantities and ratios.
- Use your own course management team to deliver stunning, water-free paths that will transform your course.

Level Two

Your club orders the materials required for the project, and PMP Surfacing sends two qualified installers to carry out the installation. Flexipave requires a team of four, so the golf club provides two members of staff to support the PMP Surfacing installers. Level two requires no prior training, as your team will be guided by the PMP Surfacing installers throughout.

Level Three

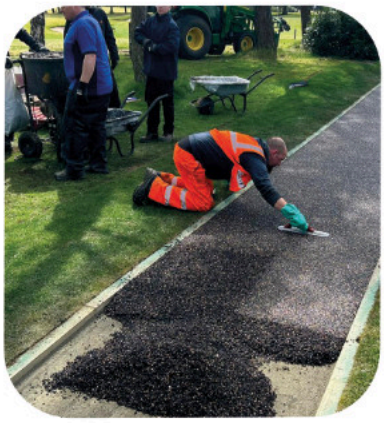

A complete turnkey solution. PMP Surfacing measures the project, orders the materials, and fully coordinates the installation by supplying a complete on-site team of installers. We can also plan a phased programme of work over several years to align with the club's long-term ambitions, helping you to budget and manage your development.

Hardware and Site Support

For clubs looking to join our Level one scheme, PMP Surfacing can supply essential equipment - such as specialist mixers - on a short, medium or long term hire basis, reducing the capital outlay required to become operational. PMP Surfacing can also supply other ancillaries such as hand trowels, plastic barrows, branded PPE and other installation-related items, removing the inconvenience of sourcing from multiple retailers.

What is Flexipave?

Flexipave is a mixture of recycled rubber granules (derived from end-of-life vehicle tyres) and stone aggregate. The combination of rubber within the material and our proprietary binder provides the finished surface a dynamic flexibility that would be impossible to achieve with traditional hard-landscaping materials.

Flexipave is installed by hand or power-float to achieve the required depth. The thickness of the finished surface depends on its intended application but our engineers work closely with clients to identify the best solution for the project.

The finished surface is:

- Highly porous - allows water and air to flow through the material in high volumes.
- Dynamic - the unique polyurethane binder allows the finished surface to gently flex, giving it the ability to adjust to different temperatures and conditions without cracking.
- Adaptable - Flexipave can be installed over existing hard surfaces but can also be installed onto simple stone sub-bases and "no-dig" cellular systems.

Testimonials

"I first introduced my Board of Directors at the club I managed, Bloxwich Golf Club, to the capabilities of Flexipave in late 2009. Following extensive research into the product, which aimed to justify its suitability for the golf environment, a decision was taken by the Board to progressively replace various notoriously wet course pathways.

Implementation started in 2010–11 with an extensive pathway between the clubhouse and the first tee. Historically, this area was exceptionally bad during the wet winter months and also negatively impacted first impressions for club visitors. In addition, a buggy return pathway from the 18th green, running alongside the 10th tee, was included, along with a section in a nearby gateway between the course and the main car park. The pathways had a very significant impact on both member and visitor satisfaction and formed the basis for the decision to extend the network to other problem areas. I retired in 2014, but the installation continued thereafter.

Fast forward to 2021, and I visited the club to play in an Open competition. I was very impressed with the durability of the Flexipave product, some of which had by then been in situ for over 10 years. Apart from natural fading, all the paths had survived remarkably well. I was particularly impressed in areas where the edging soil had eroded, as the edges of the Flexipave remained fully intact and in as good condition as the day they were laid. I took the opportunity after my round to speak to members of the greens staff, who expressed their wholehearted support for the product, especially since their only maintenance requirement was the occasional spray with weedkiller.

I remain proud of my work in sourcing the product, the commitment of the club to install it, and the positive contribution it has made to members and guests alike in their enjoyment of the game".

Rob Wormstone, Retired Secretary/ Manager - Bloxwich Golf Club Ltd (2004 - 2014)

"We were looking for a long-term solution for path surfacing at our golf club, initially focusing on an area which, as well as having a steep gradient, was very prone to flooding and dangerous underfoot during the winter months.

The Flexipave product, installed by PMP, provided a solution beyond our expectations. Its durability, aesthetic finish and weatherproof qualities have prompted us to create a long-term plan to replace all course paths with Flexipave.

Very well received by both our members and team alike, we quickly developed the ambition to commit to installation training and now have a full team of staff who are qualified to lay this surface.

The input from the PMP representatives—from sales through to installation—has been invaluable, and we have developed a long-standing relationship which we hope will be mutually beneficial for many years to come".

Layla Levy, General Manager, Whitley Bay Golf Club
