Merlin Entertainments

Merlin Entertainments is a global leader in location-based family entertainment. As one of the world's largest attraction operators, it creates and delivers memorable, immersive brand experiences for its millions of guests.

PMP Surfacing has delivered some exciting projects in collaboration with the Merlin Magic Making team, contributing to some of the UK's biggest attractions, such as the Hyperia project at Thorpe Park and the World of Jumanji at Chessington World of Adventures.

Hyperia, Thorpe Park

Hyperia, the UK's tallest and fastest rollercoaster, opened in May 2024 and quickly became one of the nation's premier attractions. PMP Surfacing installed a premium resin-bound surfacing material in a meadow blend throughout the site. Additionally, a natural stone carpet was fitted within the Hyperia merchandise shop to provide high-quality, durable interior finish.

Vibrant Flexiglass Surfaces

In collaboration with Merlin Entertainments, we contributed to several creative projects, including this installation at Alton Towers. Using Flexiglass—a high-gloss, coloured glass material—PMP Surfacing designed and produced vibrant rainbow "swooshes" and a decorative star feature. These elements were carefully crafted to align with the playful and imaginative theme of the CBeebies Land area within the park. The result is a visually striking installation that enhances the overall guest experience while perfectly complementing the themed environment.

Durable Beauty, Minimal Maintenance

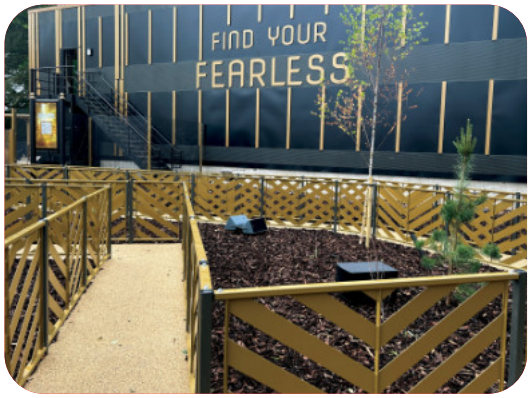

Highly Decorative - enhances any space with vibrant colours, patterns, logos, or bespoke designs, creating visually striking surfaces that leave a lasting impression.

Low Maintenance - durable and easy to clean, reducing upkeep time and costs while keeping surfaces looking pristine for years.

Bespoke Blends - customisable colour and aggregate combinations to match your design vision perfectly.

Fully Permeable (SuDS Compliant) - allows water to drain through naturally, preventing puddles, reducing flood risk, and meeting sustainable drainage regulations.
