

PMP Surfacing

The UK's Principal Strategic Partner for **flexipave** & **flexistone**

National Library of Wales Case Study

The National Library of Wales, Aberystwyth, is the national legal deposit library of Wales and is one of the Welsh Government sponsored bodies.

It is the biggest library in Wales, holding over 6.5 million books and periodicals, and the largest collections of archives, portraits, maps and photographic images in Wales.

Work to resurface the public access around the building using Flexipave began in Spring 2021.

The entrance footpath was previously a slippery stone surface, which created safety issues for visitors arriving and departing the building.

Working closely with the clients objectives, KBI replaced the stone using 230m² of Flexipave in our Elegant Green colour. The recycled rubber used within the material utilised 615 recycled car tyres, making it extremely eco-friendly.

The client was extremely happy with the outcome, particularly as the installation was carried out at short notice just in time for the library to re-open after the winter lockdown.

SUSTAINABLE POROUS PAVING SOLUTIONS

PMP Surfacing is a specialist supplier of sustainable porous paving solutions. The products we supply have been created and developed by us, making us one of the leading exponents of porous surfacing. Our materials are significantly different to traditional hard surfaces and resin bound solutions, and offer a number of benefits as a result of their two key features: high porosity & flexibility.

Highly porous - Allows water and air to flow through the material in high volumes.

Dynamic - The unique polyurethane binder allows the finished surfaces to gently flex, giving them the ability to adjust to different temperatures and conditions without cracking.

Adaptable - KBI products can be installed over existing hard surfaces, but can also be installed on to simple stone sub-bases without the need to lay costly engineered sub-layers.

KBI Flexipave is:

- Highly porous, allowing large volumes of water and air to penetrate the material.
- Able to be installed on to a number of different bases, including standard compacted stone.
- Dynamic, with the ability to gently flex and adjust to minor movement.
- Able to withstand extreme temperatures without cracking.
- Available in a variety of colours.

The logo for flexipave features the word "flexipave" in a lowercase, sans-serif font. The "flexi" part is in black, and the "pave" part is in red. Above the "i" in "flexi" is a black, curved graphic element that resembles a stylized leaf or a drop.
