

Legoland Mythica, Windsor resort

LEGOLAND: MYTHICA

Opened in Summer 2021, MYTHICA at LEGOLAND Windsor is a brand-new themed area that incorporates three new rides.

Having previously worked on the park's Haunted House project in 2020, PMP Surfacing was contacted by B&E Services to explore design options for the Mythica area.

Starting with a basic brief, the PMP team was subsequently introduced to the LEGOLAND architects who explained their vision

PMP created a brand new product for the project; Flexiglass. Using highly polished coloured glass, PMP was able to create coloured 'veins' that matched the surrounding architecture of the MYTHICA zone.

The use of the blue pigmented quartz helped to create a subtle reference to the overall colour scheme deployed across the MYTHICA kingdom. Over 30 samples were created before the final colour was selected.

SPECIFICATION:

- Flexistone
- Flexiglass
- Installation duration
– 3 months

“The LEGO Land Mythica project posed some unique challenges for the team at PMP. The unique colour scheme meant that we had to undertake extensive research and development in order to source the correct raw aggregate for the Flexistone, and to ensure that the chosen aggregate would work with our unique binding agent. We also had to carefully plan the installation process so that we could work around the bespoke moulds that helped to create the lighting bolts. Finally, the most significant element was the creation of a completely new product; Flexiglass. This product was developed in order to achieve the specific visual concept that the architects had designed.”

Peter Beavon, PMP Surfacing Project Manager

flexistone

A unique blend of the Flexistone system was developed that incorporated blue pigmented quartz stone into the usual blend, creating a visually dynamic surface that fulfilled to drainage and access requirements for the area.

KBI's Flexistone system was selected in order to provide a durable, highly porous surface that would tolerate the high pedestrian footfall, but also allow vehicular access to the area outside of opening hours

- **HIGHLY DECORATIVE**
- **LOW-MAINTENANCE**
- **MULTIPLE COLOURS**
- **FULLY PERMEABLE**
