Legoland Mythica
World of Mythical Creatures

LEGOLAND Mythica is a brand-new themed area that incorporates three new rides.

Having previously worked on the park's Haunted House project in 2020, PMP Surfacing was contacted by B&E Services to explore design options for the Mythica area. Starting with a basic brief, the PMP team was subsequently introduced to the LEGOLAND architects, who explained their vision for the project.

Flexiglass Product

PMP Surfacing developed a brand-new product for the project: Flexiglass. This system utilises highly polished, coloured glass and PMP was able to create coloured 'veins' that matched the surrounding architecture of the Mythica zone.

The use of blue-pigmented glass and quartz created a subtle reference to the overall colour scheme deployed across the Mythica Kingdom.

Project Innovation Journey

The LEGOLAND Mythica project posed some unique challenges for the team at PMP. The specialised colour scheme meant that we had to undertake extensive research and development in order to source the correct raw aggregate for the Flexistone, ensuring it was fully compatible with our specialised binding agent.

We also had to carefully plan the installation process so that we could work around the bespoke moulds that helped to create the lightning bolts. Ultimately, the most significant achievement was the creation of a completely new product; Flexiglass. This product was developed in order to achieve the specific visual concept that the architects had designed.

PMP Resin Bound Surfacing

A bespoke blend of the PMP Resin Bound Surfacing system was developed, incorporating blue-pigmented quartz into the aggregate mix, creating a visually dynamic surface that fulfilled the drainage and access requirements for the area.

Benefits

Highly Decorative – enhances any space with a clean, professional finish provides the flexibility to create visually engaging designs and patterns.

Fully Permeable – designed to allow water to drain through the surface, preventing puddling and supporting effective, natural drainage.
