Polygon Road, NW1 Play Area

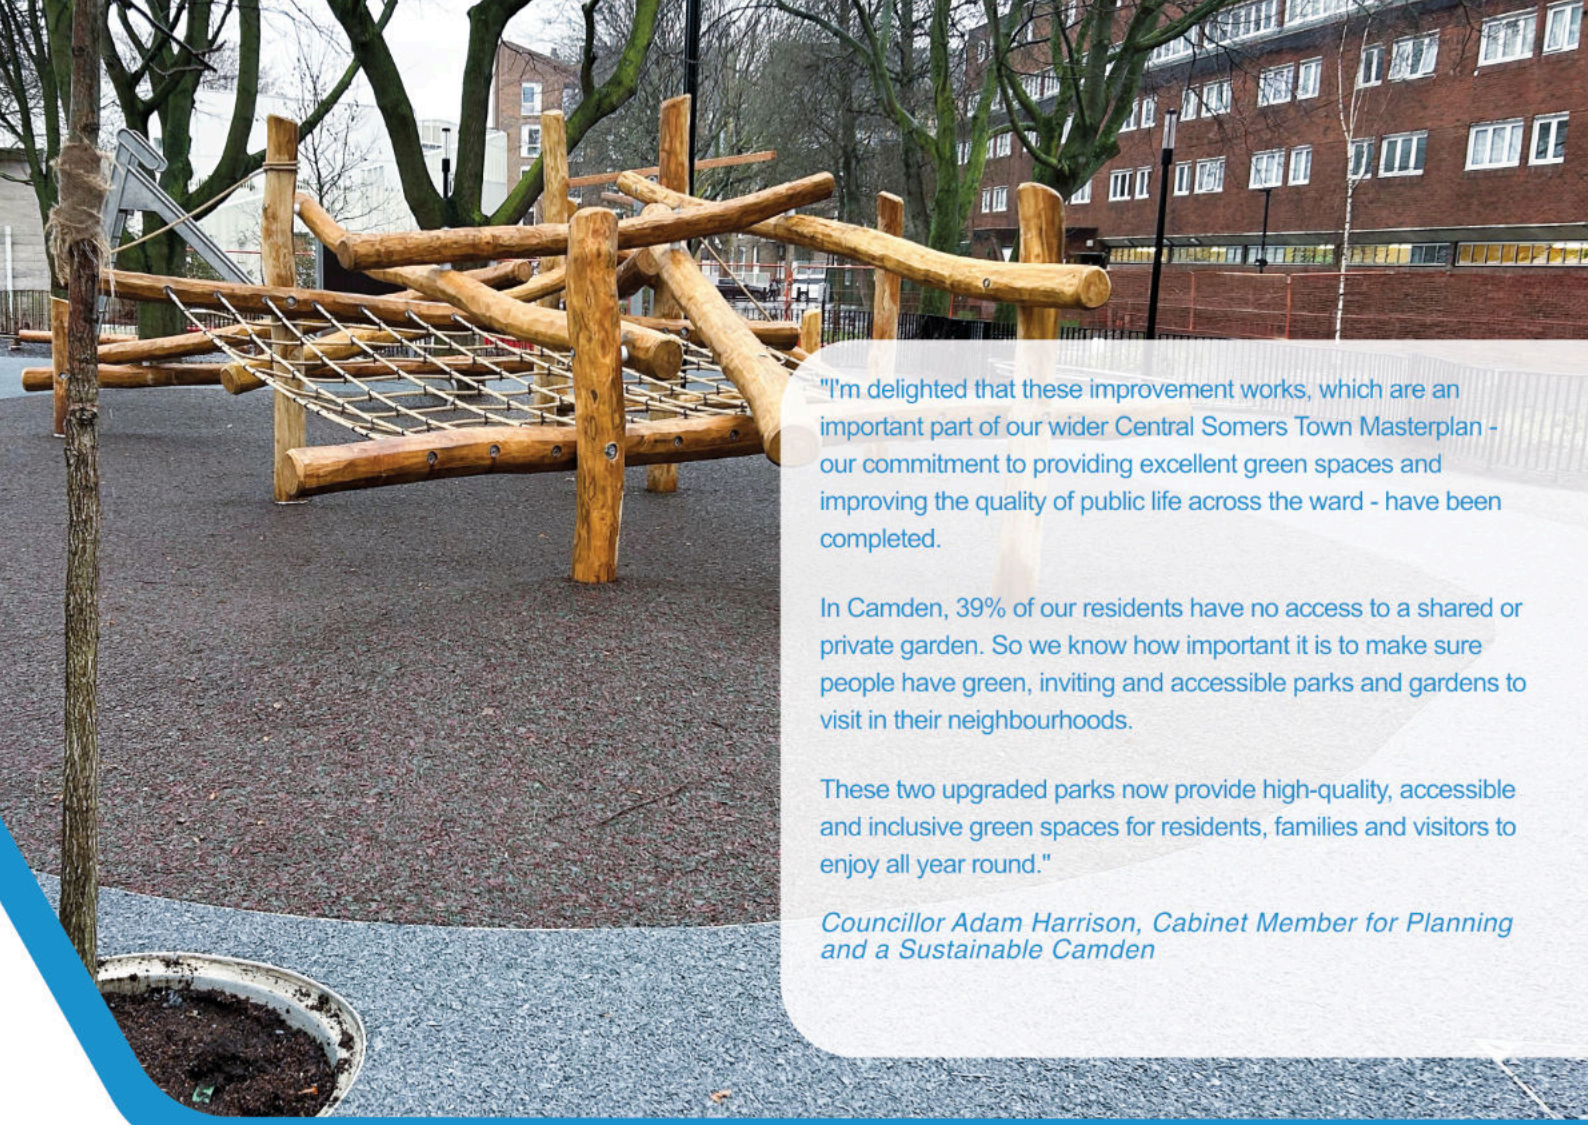

Located near Euston and King's Cross stations in Camden, London, Polygon Road Play Area is a well-maintained, enclosed children's playground widely regarded as a hidden gem within the city. PMP Surfacing was proud to deliver this multi-surface project on behalf of Maylim, helping to create a safe, accessible and visually appealing recreational space for the local community. PMP Surfacing supplied and installed over 1,100m² of Bound Rubber Mulch Safety Surfacing at varying depths, carefully designed to meet the critical fall height requirements specified by the playground equipment manufacturers. Installed in multiple colour blends, the surface provided essential impact attenuation while enhancing the overall aesthetic of the development. The natural appearance and softer tonal variations helped create a welcoming and visually appealing environment, complementing the surrounding landscape and play features. The finished installation successfully introduced warmth, texture and character to this vibrant inner-city recreational space.

Flexipave System Installed

Our team supplied and installed Flexipave pathways throughout the site, creating durable, porous and sustainable routes that connect the various play and activity areas. Manufactured using recycled vehicle tyres, Flexipave provides excellent permeability and year-round accessibility while complementing the natural surroundings. We also supplied and installed our Bound Rubber Mulch Safety Surfacing System within all play zones and the outdoor gym facility, delivering outstanding impact attenuation, durability and a natural appearance. Together, both surfacing systems provide a safe, attractive and low-maintenance environment for visitors.

"I'm delighted that these improvement works, which are an important part of our wider Central Somers Town Masterplan - our commitment to providing excellent green spaces and improving the quality of public life across the ward - have been completed.

In Camden, 39% of our residents have no access to a shared or private garden. So we know how important it is to make sure people have green, inviting and accessible parks and gardens to visit in their neighbourhoods.

These two upgraded parks now provide high-quality, accessible and inclusive green spaces for residents, families and visitors to enjoy all year round."

Councillor Adam Harrison, Cabinet Member for Planning and a Sustainable Camden

Bound Rubber Mulch Safety Benefits

Enhanced Safety - Bound Rubber Mulch was installed at depths designed to meet the required critical fall heights of the playground equipment. This helps reduce the risk of injury from falls and provides a safer play environment.

Natural Appearance - the use of multiple colour blends creates a natural, attractive finish. The softer tones complement the surrounding landscape and play features.

Durable and Long-Lasting - the bonded surface stays firmly in place and performs well under heavy use and changing weather conditions. This ensures consistent safety and appearance over time.

Low Maintenance - unlike loose bark or woodchip surfacing, Bound Rubber Mulch does not need regular topping up or raking. This helps reduce maintenance time and costs.
