CBeebies Land at Alton Towers Resort

PMP Surfacing was appointed to carry out remedial works in front of the CBeebies Land Hotel. We were asked whether we could achieve the vision the hotel had when it originally opened in 2017. Having previously installed our Springback safety surfacing at the hotel in 2022 we were delighted to be invited to return to give the area a completely new look.

To achieve this, we removed all existing surfacing and re-prepared the groundworks and sub-base to make it fully permeable. We then installed our Meadow Flexistone blend for the main area, along with six bespoke accompanying Colourbound colours, supplied by Vuba Resin Systems. The revamped surface was designed to create a vibrant and exciting welcome for the hotel's guests while offering the operators a hard-wearing, low-maintenance solution.

Specialist Surfacing with Flexiglass

Flexiglass is a decorative surfacing product developed by KBI as part of their porous paving range. It is a specialist surface finish that incorporates polished decorative glass, combined with a proprietary binder technology, similar to their established Flexipave systems.

Designed to integrate seamlessly into porous paving schemes, it adds visual impact through coloured or patterned detailing such as veins, highlights and feature areas, while maintaining full compatibility with permeable surfaces. This allows projects to achieve enhanced aesthetics without compromising durability. Instead of a standalone system, Flexiglass is a glass-enhanced element used within surfacing to create striking, customised finishes.

Key Benefits of Decorative Resin Surfacing

Highly Decorative - allows for vibrant, custom designs including patterns, logos, emblems and bespoke colour blends, enhancing the visual appeal of pathways and surfacing areas.

Low-Maintenance - the durable polyurethane binder system resists wear and fading, reducing the need for frequent repairs or upkeep.

Bespoke-Colour Blends - colour pigments can be tailored to specific requirements, including exact RAL colours, allowing complete creative flexibility.

Fully Permeable (SuDS Compliant) - the system supports sustainable drainage systems (SuDS) by allowing water to pass through, helping to manage surface run-off and prevent flooding.
