Domestic Application of KBI Flexipave

Although it's designed and tested for commercial applications, KBI Flexipave is perfect for domestic applications such as garden patios and access paths.

The material offers a low-maintenance alternative to traditional materials like stone flags and block paving, with the added functionality of being completely porous.

KBI Flexipave can be overlaid on to certain types of existing hard surfaces, removing the need to take up and dispose of the old material. This can significantly reduce costs and time on site.

Housing associations seeking to revamp their portfolio should seriously consider KBI Flexipave.

The porous nature of the material also means that it can be used to harvest rainwater for grey water applications. We offer several innovative options for the capture and attenuation of rainwater.

 **Highly porous** - Allows water and air to flow through the material in high volumes.

 **Dynamic** - The unique polyurethane binder allows the finished surfaces to gently flex, giving them the ability to adjust to different temperatures and conditions without cracking.

 **Adaptable** - KBI products can be installed over existing hard surfaces, but can also be installed on to simple stone sub-bases without the need to lay costly engineered sub-layers.
